Courses Handling Faculty:

Dr. HAFIZUR RAHMAN

Associate Professor

1

Ticket Booking Web Application

- The rapid growth of digital technologies has transformed the way events are managed and accessed.
- Traditional ticket booking methods are often time-consuming, manual, and prone to errors.
- To overcome these limitations, a web-based ticket booking system provides a simple and efficient solution.
- This project focuses on designing and developing a **React JS-based web application** for booking tickets for internal department events such as technical fests, workshops, or seminars.
- The application allows users (students or faculty) to:
 - View complete event details in one place
 - Book tickets online بسهولة and quickly
 - Receive instant booking confirmation
- The system ensures:
 - Real-time tracking of available tickets
 - Prevention of overbooking
 - Input validation for accurate data entry

PROBLEM STATEMENT

1

2

3

4

5

6

7

8

9

In many educational institutions, the process of booking tickets for internal department events such as technical fests, seminars, and workshops is often handled manually or through unorganized systems. This leads to several challenges, including difficulty in accessing event information, time-consuming registration processes, chances of human error, and lack of real-time updates on ticket availability. Additionally, there is no proper validation of user inputs, which may result in incorrect or incomplete booking details. Overbooking or mismanagement of tickets can also occur due to the absence of an automated tracking system. Therefore, there is a need for a reliable, user-friendly, and efficient web-based application that allows users to easily view event details, book tickets online, ensures proper input validation, and maintains accurate records of ticket availability while providing instant booking confirmation.

OBJECTIVE(S)

1

2

3

4

5

7

8

9

The primary objective of this project is to design and develop a user-friendly web-based ticket booking application using React JS for internal department events such as technical fests, seminars, and workshops. The system aims to provide a centralized platform where users can easily view event details including event name, department, date, time, venue, ticket price, and availability. It also focuses on enabling a smooth and efficient booking process by allowing users to enter required details and book tickets instantly, thereby reducing manual effort and saving time.

Another key objective is to ensure accuracy, reliability, and better user experience through proper input validation and real-time updates. The application is designed to prevent overbooking by restricting ticket requests based on availability and to display clear confirmation messages after successful booking. Additionally, the project aims to implement core React concepts such as functional components, state management using hooks, event handling, and conditional rendering, while maintaining clean code structure and simple user interface design for enhanced usability.

PROPOSED SYSTEM

1

Proposed System

2

- Web-based **Ticket Booking Application** using React JS

3

- Centralized platform to **view event details**

4

- Displays: Event name, department, date, time, venue, price, availability

5

- Online booking system** for students and faculty

6

- Users enter: Name, Email, Department, Number of tickets

7

- Input validation** for all fields and email format

8

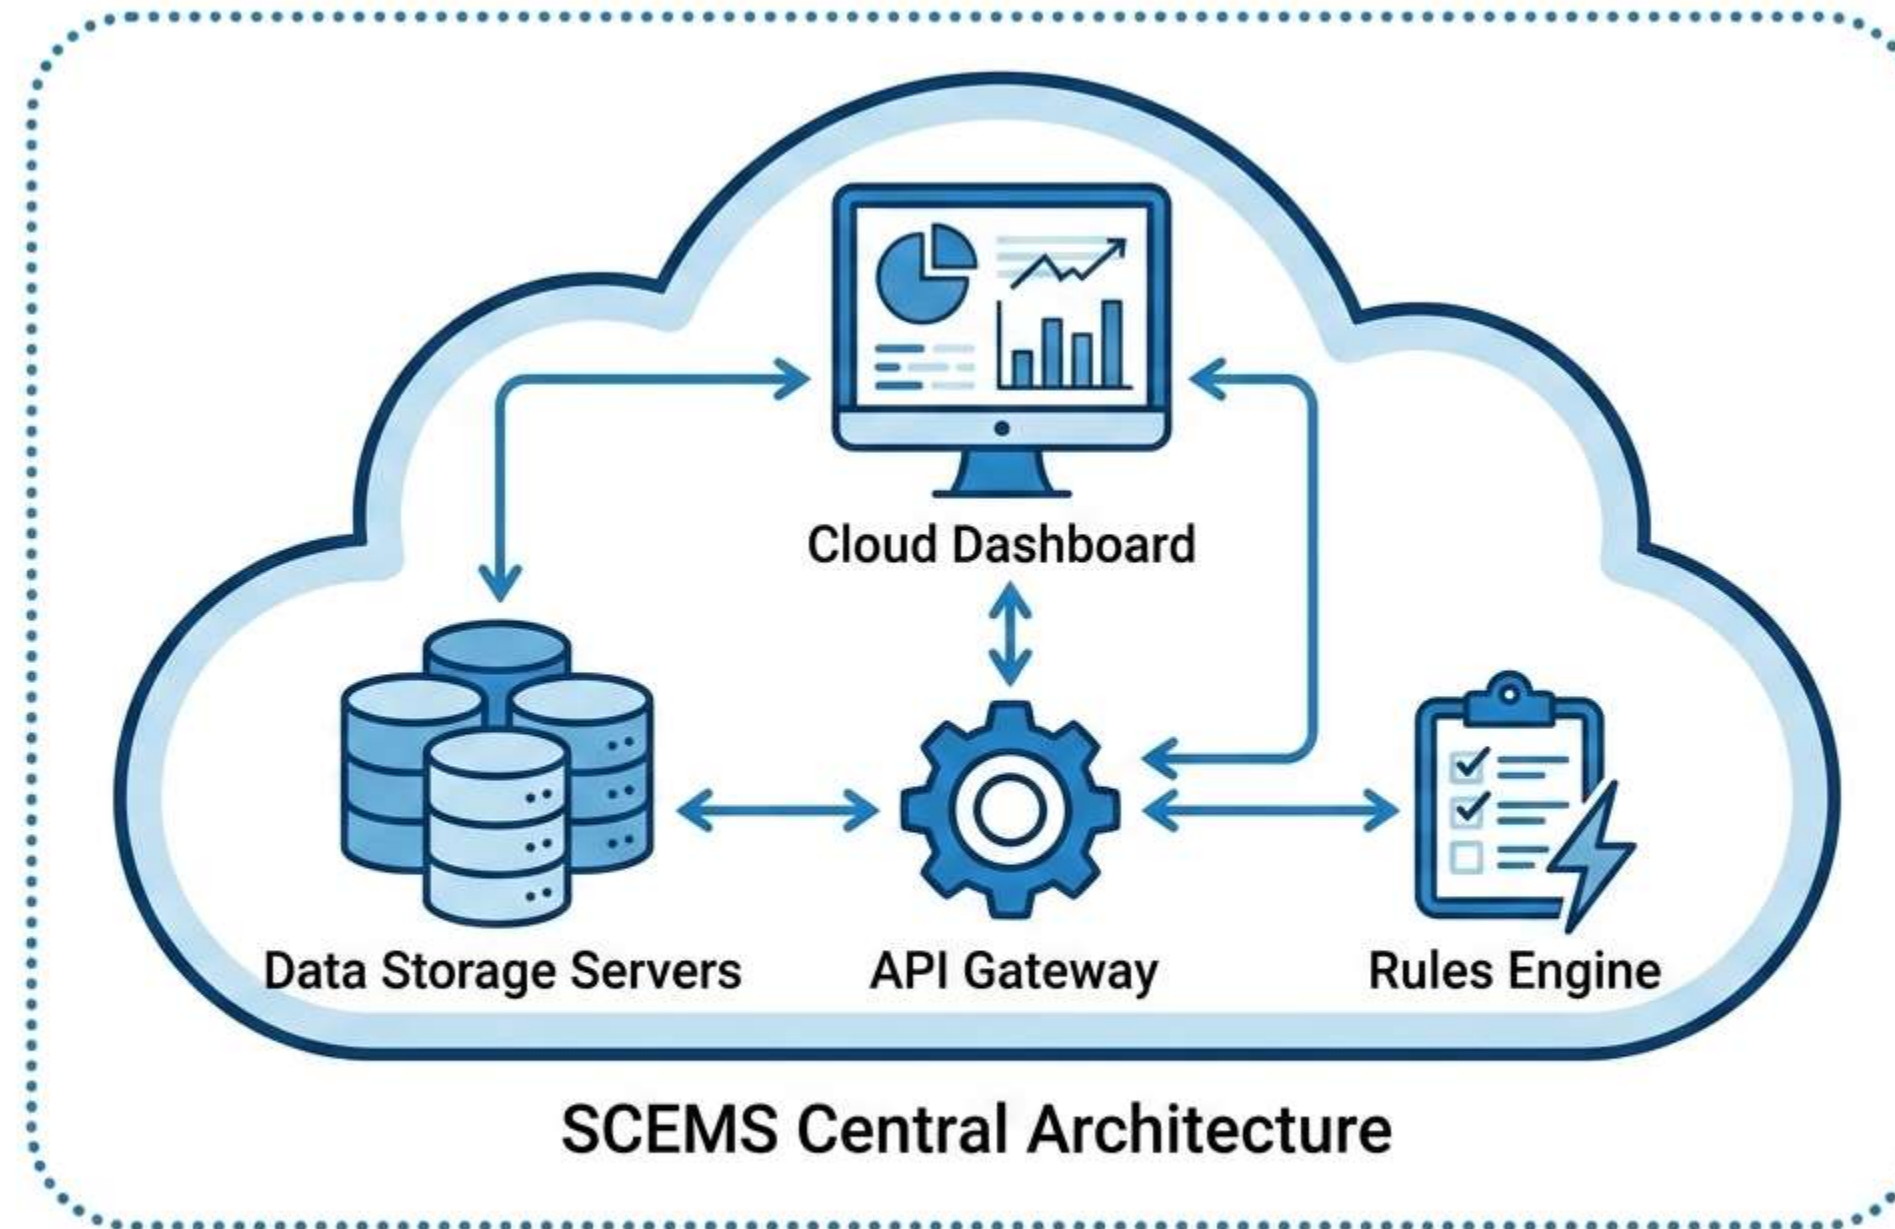

- Prevents **overbooking** based on available tickets

9

- Real-time update** of ticket availability

- Instant **booking confirmation with summary**

PROPOSED SYSTEM ARCHITECTURE

Smart Campus Event Management System - Proposed Architecture

TECHNOLOGIES USED

Technologies Used

1

•Frontend:

2

React JS (Functional Components, JSX)

3

•Programming Language:

JavaScript (ES6)

4

•State Management:

5

React Hooks (useState)

6

•Styling:

CSS / Basic UI Design

7

•Development Tools:

Visual Studio Code

8

•Browser:

9

Google Chrome / Any Modern Web Browser

MODULE DESCRIPTION

1

1. Event Details Module

- Displays complete information about the event
- Includes: Event name, department, date, time, venue
- Shows ticket price and available ticket count
- Helps users understand event details before booking

2

3

4

2. Ticket Booking Module

- Allows users to book tickets بسهولة
- Accepts user inputs: Name, Email, Department, Number of tickets
- Calculates total ticket amount automatically
- Processes booking request

5

6

7

8

3. Validation Module

- Ensures all fields are **mandatory**
- Validates correct **email format**
- Displays error messages for invalid inputs

9

4. Availability Management Module

- Tracks **available tickets in real-time**
- Prevents booking more tickets than available

The screenshot displays the 'Admin Control Panel' for 'AuraTix'. The top navigation bar includes the 'AuraTix' logo, a settings icon, the user 'Welcome, VENU', a 'Dashboard' link, and a 'Logout' button. The main content area features a 'Publish New Event' form with the following fields:

- Image Banner URL (Optional):** A text input field containing 'https://images.unsplash.com/...'.
- Event Name:** A text input field with the placeholder 'e.g. Tech Symposium'.
- Department / Category:** A text input field with the placeholder 'e.g. Computer Science'.
- Venue Location:** A text input field with the placeholder 'e.g. Main Auditorium'.
- Date & Time:** A date and time picker showing 'mm/dd/yyyy --:-- --' with a calendar icon.
- Ticket Price (\$):** A text input field with the value '0'.
- Capacity (Tickets):** A text input field with the value '100'.

A red button labeled 'Publish Event Now' with a checkmark icon is located at the bottom right of the form.

ADVANTAGES & LIMITATIONS

1

Advantages

2

- Easy and **quick online ticket booking**

3

- Provides **real-time ticket availability**

4

- Prevents **overbooking errors**

5

- Ensures **accurate data through validation**

6

- User-friendly and simple interface

7

- Reduces **manual work and paperwork**

8

- Instant **booking confirmation**

9

- Can be accessed from **any device with a browser**

Limitations

- Works only with **internet connectivity**

- Limited to **internal department events**

- No advanced features like **online payment integration** (if not implemented)

- Data storage may be **temporary (no backend/database)**

- Limited scalability for **large-scale events**

- Basic UI (if only simple CSS is used)

Thank you
